about us...

“Your Information Technology Partner”

Company Background

Bernard Johnson, the company founder, had a vision of the Internet and the information nexus that it has become in

the modern world long before web browsers were even popular. Bernard saw the gap between what the Internet could be and what it was. Since there were few companies that specialized in Internet Technologies, Bernard formed Symetrix Consulting to help companies create an online identity, and bring their business to the Internet, thus redefining the way that many companies do business.

Symetrix has been instrumental in bringing many commercial, government, and non-profit organizations onto the Internet.

The Internet is now a mature technology and Symetrix is focusing on helping both large and small business make the best of their technology infrastructures.

Technical Expertise

Since Symetrix has been working on Internet technologies for the last decade, it comes as no surprise that

we have extensive knowledge of the software and systems that make the Internet work. These are a few of the technical areas that we routinely work with:

- ▶ Complete server setup and maintenance, including Microsoft Windows servers and Red Hat Linux (or other UNIX) servers. This includes services such as email, web, database, and many others.
- ▶ Internet Identity creation.
- ▶ Publishing of corporate information to websites, including database/product management and other unique website features.
- ▶ Network design and installation of Local Area Networks, Wide Area Networks, and Point-to-Point Networks.
- ▶ Expert knowledge in Internet transports (HTTP, SMTP, etc.).
- ▶ Extensive knowledge of secure transports via encryption.
- ▶ SPAM reduction software installation and maintenance.
- ▶ Internet Multimedia Technologies, such as streaming media with Real Server, Microsoft Windows Media Server, and others.
- ▶ Complete analysis for disaster planning and recovery.
- ▶ Security Policies, Installation, and Maintenance.
- ▶ Custom Programming Assignments, using C/C++, Java, and other Internet related languages.

Prior Projects

Our current and past list of clients range from small startup companies, to large government organizations, including both large and small non-profit organizations. We are able to provide a wide range of services to those organizations. We have worked with clients as close as the same office building, and as far away as Hong Kong. No project comes too large or too small.

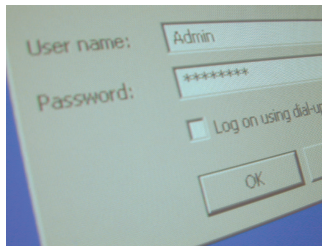

FreeOffice Initiative

Industry experts estimate that in 2001, 40% of all software was not licensed. Even when company executives strive to stay within the licensing terms of software, sometimes the software is spread by users or used in ways contrary to the license terms, putting their companies at risk of lawsuits and large fines. That coupled with the increasing cost of software and software upgrades makes commercial software less appealing all the time.

Envision an office free of the burdens of software license fees when you install new computers or upgrade software. Free your office from the huge burden of overpriced software that you get minimal use from. Ask us how to run servers and software that have no license fees or upgrade fees! And this is 100% legal software, that many times is far superior to the software that you are currently running. Check out our website for more details.

Expert On-Call Service

We recently started offering an Expert On-Call Service. This service is very much like an information technology insurance

policy. Many smaller companies believe that they can not afford the proper support for their computer systems and they refrain from hiring the technical support that they really need. This is no longer necessary! For a small monthly maintenance fee, we are able to provide 24x7 support *when you need it!* The monthly maintenance fee includes a limited amount of free consultation so that you always feel like you can get help *when you need it.* And it's all backed up by a timeliness guarantee.

Contact Us

Remember that your initial consultation is free. There is absolutely no commitment or cost in scheduling an appointment to hear how we can help you.
